Education

B.Tech in Computer Engineering

Sardar Patel Institute of Technology, Mumbai

2023 - 2027

CGPA : 8.4

Minor in UI/UX

Pearl Academy, Gurugram

2025 - 2027

CGPA : 9

Technical Skills

- **Languages:** Python, Java, C++, JavaScript, SQL
- **Frameworks:** LangGraph, Django, Express, Tailwind
- **Libraries:** NumPy, Pandas, Matplotlib, Scikit-learn
- **Databases/Tools:** MySQL, Git, GitHub, Docker, Jenkins, AWS, Firebase, Figma, VS Code
- **Certifications:** AWS Cloud Practitioner Essentials

Experience

AIM4U Software Solutions

August 2025 – October 2025

Artificial Intelligence and Machine Learning Intern

Mumbai, India

- Developed a multi-class skin disease classifier for Acne Vulgaris, Acne Scars, Acne Corporis, and Melasma using OpenAI's CLIP, engineering a transfer learning pipeline to boost detection by 15% over the existing model.
- Architected an end-to-end data pipeline leveraging multimodal embeddings from images and natural language prompts, rendering 89% overall accuracy.

Projects

ContentShield: Brand Content Automation | Python, RAG, LangGraph, Qdrant, LLMs

February 2026

- Designed and implemented a RAG system and multi-agent orchestration using LangGraph, where enterprises register their brand profile and documents to auto-generate compliant, on-brand social media posts.
- Stored brand documents as embeddings in Qdrant vector database for efficient semantic retrieval, ensuring generated content stays grounded in real company information.
- Retrieved relevant brand context using keyword-guided queries such as tone, banned words, and audience persona to guide accurate content generation.
- Leveraged LLMs to generate and localise approved content across multiple languages, with a human approval gate before publishing to configured social channels.

Geopolitical News Bias Detector | Python, BERT, NewsAPI

December 2025

- Built a machine learning pipeline using BERT to classify news articles as Left, Right, or Center biased, achieving approximately 90% accuracy.
- Sourced over 2,000 news articles using the NewsAPI, structured them into a labeled dataset, and preprocessed them for model training.
- Enabled bias prediction tool for news outlets with potential for deployment as a web tool or browser extension.

ScamSense: Real-time Multilingual Scam Call Detection | Python, Groq, BERT, Qwen

February 2026

- Built an end-to-end live pipeline integrating Sarvam Saaras v3 streaming STT with a Groq-hosted LLM classifier, achieving sub-second latency for real-time FRAUD/SAFE classification of phone calls.
- Curated a multilingual benchmark of 15+ scam scripts across 9 language settings (English, Hindi, Marathi, Punjabi and code-mixed pairs), with full latency instrumentation and confusion-matrix evaluation.
- Curated a cascaded 3-layer analysis engine (keyword detection → BERT classifier → fine-tuned Qwen3.5-4B) targeting on-device deployment via a mobile app for live-call alerts.

Achievements

ET GenAI Hackathon: Finalist (Top 40 out of 10K+ teams nationwide)

March 2026

Avalanche Case Study: Finalist, Sardar Patel Institute of Technology

February 2025

Leadership / Extracurricular

Social Media Campaigner

August 2024 – December 2024

Drive - Thru

Thane, India

- Generated over 30,000+ user engagements for 'Drive-Thru' on Instagram, executing a digital content strategy.
- Spearheaded and scheduled visual content across reels, stories, and posts, growing the page's reach and follower base through trend analysis and audience targeting.
